We are Executive Search.

Business Intelligence is an integral part of our projects and practice. We regularly monitor and analyze trends within our leadership community.

We are developing a tool based on **Artificial Intelligence** designed to predict a leader's success in a specific role and business, in alignment with the company's culture and values.

As part of our projects, we conduct **comprehensive psychological testing**, which serves to evaluate and develop leaders while ensuring their successful integration. Anderson Willinger, in collaboration with colleagues from INSEAD, has identified the most important areas, including personality traits crucial for managing organizations in today's turbulent times, both in the case of external recruitment and promotions. Based on this knowledge, the AW team has defined the best global tools to understand where both the company and the leader stand and what their critical development areas are.

We not only assist our clients in setting strategies and selecting key executives, but we also partner with them in **educating and inspiring top management on current global trends**.
